

Seating and Mobility Clinic

Seating and mobility evaluations include an assessment of posture, strength, range of motion, skin and mobility as it pertains to the use of wheelchairs and other medical equipment. This information is used in the assessment of appropriate positioning and mobility devices.

SERVICES PROVIDED:

Evaluation for custom durable medical equipment to include:

- Manual and power wheelchairs
- Cushions
- Backs
- Bathroom equipment
- Other related mobility equipment
- Custom molding for seating

PATIENTS SERVED:

Seating and mobility clinic serves pediatric and adult patients with a variety of neurological and other diagnoses causing physical limitations that affect function, posture, positioning, skin integrity and mobility.

PRESSURE MAPPING

Pressure mapping measures interface pressures with different cushions, back rests or mattresses. It provides information on interface pressures with different cushions or backs (valuable for the client with skin breakdown).

EQUIPMENT SELECTION BASED ON:

- Patient and family goals
- Evaluation of function, muscle tone, range of motion, skin breakdown risk and positioning
- Accessibility of home, school and community
- Transportation
- Funding of equipment

PROFESSIONAL STAFF INVOLVED:

- Experienced physical therapists with RESNA certification and/or training in assistive technology
- Assistive technology professionals from local rehab technology suppliers
- Consulting occupational therapist or speech language pathologist as needed
